

It's Not Always Sunny in SoCal: The Historic Atmospheric River of February 4-6, 2024

Ariel Cohen, Robert Munroe

The weather in southern California in 2023 and 2024 was far from “always sunny”. Between atmospheric rivers and flooding, a blizzard, tornadoes, Tropical Cyclone Hilary, and a 20-year surf event causing coastal flooding, the NWS LA/Oxnard team worked closely with Core Partners through these events to support disaster readiness, response, and recovery. This presentation will focus on the NWS's mission delivery for the historic February 4-6, 2024 Atmospheric River event.
